Description

702 is a long-bladed rubber swim fin made in Taiwan. It is available in one or two colours, including black, blue, red and camouflage.

Features:

- Balanced blade and soft comfortable foot pocket ensure performance, comfort and durability.
- Open-toe design for quick draining.
- Size: M, L, XL.
- The freediving fins are moulded from a single piece of rubber, with a single deep foot pocket.
- The freediving fin features a deep centre channel running the entire length of the blade, combined with a J-flex motion and rigid side channels; it gives the diver optimum propulsion in any free diving or spearfishing scenario.
- With a tapered flex on the fins, becoming less rigid towards the tip, the freediving fin creates a smooth fluid finning motion for effortless movement in the water.
- A medium to long durable fin made from high-quality yet soft rubber and a popular choice for underwater hockey players.
- The freediving fin is excellent value for money and is a great fin for anyone looking to get into freediving, as it is extremely affordable compared to some other freediving fins on the current market.
